MINIATURE WRENCHES ARE SLIM AND STURDY

Most miniature wrenches are either thick and clumsy or are flimsy stampings from thin sheet metal. These fine sets are just right. Heads are only $\frac{3}{32}$ " to $\frac{1}{8}$ " thick, depending on size. Heads are smaller, too, for tight spots.

Yet they meet industry and government standards. Forged of alloy steel. Heads coined and broached accurately to size, and polished. Bright chrome plated. Sizes fit fastenings in carburetors, electrical systems, appliances, small mechanisms. Each size marked. About $3\frac{1}{4}$ " to 4" long. 15° - 60° heads.

E-1566 8-wrench set, vinyl pouch. Sizes $1\frac{3}{64}$ x $1\frac{5}{64}$, $1\frac{5}{64}$ x $1\frac{3}{64}$, $\frac{7}{32}$ x $\frac{1}{4}$, $\frac{1}{4}$ x $\frac{7}{32}$, $\frac{9}{32}$ x $\frac{5}{16}$, $\frac{5}{16}$ x $\frac{9}{32}$, $\frac{11}{32}$ x $\frac{3}{8}$, $\frac{3}{8}$ x $\frac{11}{32}$ **\$7.95**
Three & up **Each \$7.20**

E-1567 4-wrench set, vinyl pouch. Sizes $1\frac{5}{64}$ x $1\frac{3}{64}$, $\frac{7}{32}$ x $\frac{1}{4}$, $\frac{5}{16}$ x $\frac{9}{32}$, $\frac{3}{8}$ x $\frac{11}{32}$ **\$4.40**
Three & up **Each \$4.00**

LEATHER STROP FOR RAZOR-SHARP TOOLS

Another superior sharpener from days when a man would make his straight razor sharp as today's best blades — as barbers still do.

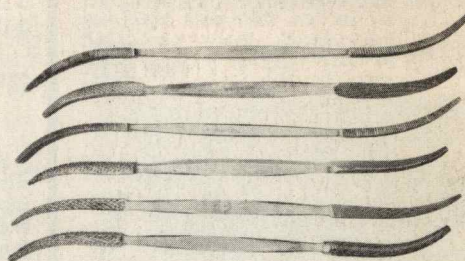

Excellent for all knives, chisels, other edge tools that work best, are safest, when dead sharp.

Faced both sides with thick "Russian-Juchten," the finest West German hand-tanned leather, finished in the old Russian manner, and impregnated with ultra-fine abrasives.

Red side, rouge-impregnated, hones, sharpens — gently, without tearing the metal. Black side for finishing — polishes the edge till it will shave close and clean. Use dry — no mess.

About 12" long. Finely finished beechwood handle. Leather facings about 8" x $1\frac{1}{2}$ ".

D-1360 Double strop **\$1.90**
Three & up **Each \$1.65**

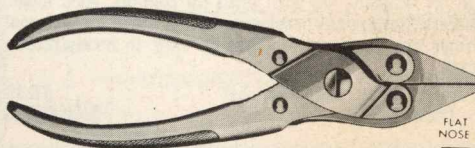

SCULPTORS' RASP-FILES EVEN CUT STONE

Sculptors' wood file-rasps tough enough to cut marble and other "soft" stone! Made of genuine A-1 file steel as used in industrial metal-cutting files. Scientifically heat treated for best wear resistance.

Complete set of six versatile shapes. Essential for shaping wood, plaster, plastics, marble and like materials in sculpture, wood carving, pattern making, cabinet work. Each is rasp cut on one end for roughing, file cut on the other for smoothing. Hard-to-find feature: both ends same shape for smoothing without risk of changing contours created with rasp end.

Fast cutting because teeth are properly cut and spaced. About 8" long. Cutting lengths about 2". Center handle portion about $\frac{1}{4}$ " square, rounded for comfort.

F-1307 Set, sculptors' file rasps **\$15.95**
Three & up **Each \$14.35**
F-1460 Replacement file rasp. SPECIFY SHAPE **Each \$ 3.00**

PARALLEL-ACTION PLIERS HOLD BETTER

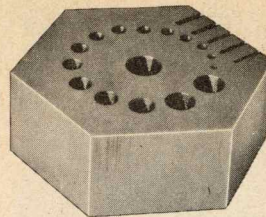

These powerful flat-nose pliers grip better than ordinary pliers because jaws are always parallel. They grip like a vise, hold like a wrench.

Excellent also for bending and shaping sheet metal, flat stock, etc.

Hardened, serrated jaws to avoid slipping. Longitudinal V-groove in jaws holds wires, pins, other round items. Open throat for passage of long pieces.

Bright nickel plated all over for beauty, rust protection. Comfort-shaped handles.

$6\frac{1}{2}$ " long. Jaws $\frac{3}{8}$ " wide, open to $\frac{9}{16}$ ".
D-1596 Parallel-Action Pliers, $6\frac{1}{2}$ " **\$3.95**
Three & up **Each \$3.50**
D-1597 Light pattern, 5", with jaws $\frac{1}{4}$ " wide opening to $\frac{1}{2}$ " **\$3.70**
Three & up **Each \$3.35**

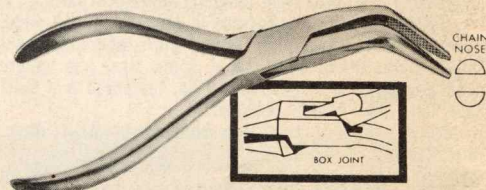

BENCH BLOCK DOES MANY JOBS

Hardened steel for lifetime use. Hex shape allows use in a vise, or on edge as anvil.

Top surface smoothly ground flat for exacting work. 15 closely graduated holes go clear thru, range from .040" (1 mm.) to $\frac{1}{4}$ " (6.35 mm.) dia. Fit practically any size punch, pin, or rivet. One fits watchmakers staking stamps.

4 milled slots (.020" to .040" wide) do many bending, holding, punching and forming jobs. About $\frac{1}{8}$ " across points x $\frac{1}{16}$ " thick.

F-1030 Bench block **\$4.65**
Three & up **Each \$4.20**

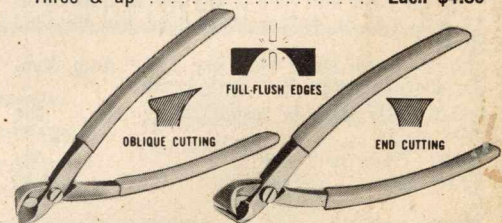

LONG CHAIN NOSE PLIERS BENT FOR ROUND-THE-CORNER WORK

These fine, problem-solving pliers would be over 7" long if left straight. They are about $5\frac{1}{4}$ " long to the bend, and the jaws extend $1\frac{1}{4}$ ", practically at right angles.

Rugged jaws are each $\frac{5}{16}$ " wide x $\frac{1}{4}$ " thick at joint, tapered to about $\frac{1}{16}$ " x $\frac{1}{16}$ " at tips, to get into small places. Finely serrated about 1" back from tips, otherwise smooth.

Smooth acting box joint for permanent jaw alignment, freedom from looseness. Full polish finish. Very nicely made.

E-1623 Bent chain nose pliers **\$5.25**
Three & up **Each \$4.80**

MINIATURE WIRE CUTTERS COME IN FINE AND ULTRA-FINE QUALITY

These miniature wire cutters cut soft wire flush, leaving no wire peak. This requires fine, sharp, hand-honed cutting edges.

Excellent for miniature electronics, instruments, work on vacuum tubes, miniature lamps, etc. Light weight reduces operator fatigue from exacting wire cutting operations.

Available in two styles: End cutter at 90° to handles, or cutters angled at about 70° with one end coming to fine point for maximum get-in ability.

Difference between the two qualities is in cutting ability. The ultra-fine quality is made of superior and more costly tool steel for longer life in production use, and there is more hand work in shaping and honing the cutting edges. Otherwise the two qualities are essentially equal.

Finely ground finish all over. About $4\frac{1}{4}$ " long. Jaws about $\frac{11}{16}$ " long on cutting edges.

E-1624 Fine quality 90° cutter **\$5.00**
Three & up **Each \$4.65**
E-1625 Fine quality angled cutter **\$5.00**
Three & up **Each \$4.65**
E-1626 Ultra-fine quality 90° cutter **\$8.50**
Three & up **Each \$8.00**
E-1627 Ultra-fine quality angled cutter **\$8.50**
Three & up **Each \$8.00**
